

DIAPHRAGM CONTROL APPARATUS FOR LENS OF CCTV CAMERA

ABSTRACT OF THE DISCLOSURE

5 A diaphragm control apparatus for a lens of a CCTV
camera having a diaphragm driver for opening or closing
a diaphragm in accordance with a diaphragm control signal,
includes a remote diaphragm controller which outputs a
remote diaphragm control signal to set an optional
diaphragm position, a diaphragm control signal setting
10 device which sets a diaphragm control signal in accordance
with the remote diaphragm control signal and which outputs
the diaphragm control signal to the diaphragm driver to
move the diaphragm to a diaphragm position corresponding
to the diaphragm control signal, and a power source which
15 supplies power to the diaphragm control signal setting
device. The diaphragm control signal setting device is
provided with a memory for storing the diaphragm control
signal when the power supply is interrupted, so that the
diaphragm control signal which has been set at the
20 interruption of the power supply can be output when the
power supply is carried out again.
